

Environmental Studies

~2 minutes

What is humankind's relationship to its environment?

How do natural systems operate?

What are some of today's most pressing environmental issues?

How do we address the complicated issue of environmental justice?

What are key environmental issues on the Southwestern campus and in Central Texas?

From these starting points, environmental studies students will begin an examination of the world around them that will continue through their time at Southwestern and into their lives beyond the classroom.

Environmental Studies is one of the Paideia Minors. Paideia provides intentional opportunities for students to integrate various academic disciplines and experiences, empowering them to develop versatile analytical abilities that lead them to become creative problem solvers who are well equipped to tackle complex issues. Paideia is not a traditional program but provides innovative, structured pathways that enable the acquisition of these invaluable skills.

All SU students are encouraged to graduate with Paideia Distinction by making Paideia a formal part of their studies. This requires completing either one of the Paideia Minors (or two High-Impact Experiences) and successfully completing a Paideia Seminar.

Graduation with Paideia Distinction formally recognizes students' cultivated curiosity to learn, integrate multiple viewpoints, and create change. The Paideia skills that students develop make SU graduates highly sought-after by recruiters, employers, and graduate programs.

Learn more about the [Paideia Seminar](#), how to apply for it, and how to graduate with [Paideia Distinction](#).
